<b>Description</b>			
<p>The charger rate displayed in the vendor sessions/revenue screen is not consistently correct when multiple rate fields are available. Currently, the system directly uses energy_rate, which can lead to incorrect or null values in scenarios where ocpi_energy_rate (markup rate) is present.</p> <p>To ensure accurate pricing, the charger rate should follow a fallback logic:</p> <p>Use ocpi_energy_rate (markup energy rate) if available Otherwise fallback to energy_rate If both are null, default to 0</p>
