Today I worked on multiple report enhancements across the system. I completed improvements in the Session Details report, aligning the column structure with the required Excel format, fixing date formatting to display correctly, and ensuring proper binding for fields like GST, quantity, and ledger details. I also worked on the Wallet Refill Transaction report, where I simplified the data mapping and implemented the customer ID format (e.g., CEPL_00XXXX) consistently for better readability. In addition, I reviewed and followed the structure of the New User Registration report to keep formatting and logic consistent across modules. Along with these updates, I handled fallback conditions for fields like Free State and Place of Supply and resolved minor data-binding issues.
