Description			
Changes in service date on add station by default set to null			

History

#1 - 07/02/2026 08:58 AM - Saransh Bakoliya

Today i have worked on ->

Added a new Status filter to the Charging Station Management filter model and updated the filter interface to support dynamic status filtering.

Updated filter state management by extending both filters and appliedFilters with the new status field.

Enhanced the Reset Filters functionality to clear the newly added Status filter along with Search and Location.

Designed and integrated a Status dropdown in the filter section using the existing application UI/UX style and primary theme.

Updated the filter layout to accommodate Search, Location, and Status on the same responsive row.

Configured the Status dropdown to support dynamic values and prepared it for backend API integration.

Connected the Status filter with the existing Apply/Search workflow using the current filter handling logic.

Updated the charging station listing request to include the selected status parameter in the API payload.

Modified the charging station data loading logic to react to Status filter changes and refresh the list accordingly.

Fixed TypeScript interface and state initialization issues caused by introducing the new Status filter across the project.

Verified compatibility of the new filter with existing search, location filtering, pagination, and responsive layout.

Performed end-to-end testing of the Status filter integration, resolved implementation issues, and prepared the feature for backend validation and API response testing.
