History

#1 - 07/13/2026 09:22 AM - Shreya Agarwal

updated the Amenity Management UI to match the Charger Tag design standards. The header section has been completely redesigned with a flex layout, responsive behavior, and the "Add Amenity" button has been properly positioned in the header with consistent styling. Implemented new state management with draftSearch and draftStatus variables for better filter control, along with handleApply and handleReset callback functions that integrate seamlessly with the API for efficient data fetching. The search input field has been enhanced with proper labeling, updated placeholder text, and improved styling with 56px height and 3px border-radius to match the Charger Tag UI pattern. The foundation is now solid for completing the remaining filter and table updates.
