Target version:		Spent time:	0.00 hour
Description			
Title: Show "Daily Data Refresh in Progress" banner during scheduled dashboard rollup execution			
Type: Enhancement			
Priority: Medium			
Background:			
The system executes scheduled rollup jobs daily between 12:01 AM and 12:15 AM IST to calculate and refresh dashboard analytics.			
Schedulers involved:			
- analytics-rollup			
- advanced-analytics-rollup			
- tenant/summary-rollup			
During this period, dashboard widgets, reports, and analytics may display incomplete or outdated data until processing is completed.			
Requirement:			
Display an informational banner on the dashboard while the daily rollup jobs are running.			
Banner Title:			
☐☐ Daily Data Refresh in Progress			
Banner Message:			
Your dashboard is currently being updated as part of our scheduled daily data refresh (12:01 AM – 12:15 AM IST). During this time, analytics, reports, and summary metrics may temporarily display incomplete or outdated data. Please refresh the dashboard after 12:15 AM IST for the latest information.			
Display Conditions:			
- Show the banner between 12:01 AM IST and 12:15 AM IST every day.			
- Automatically hide the banner after 12:15 AM IST.			
- Display the banner on all dashboard pages that consume rollup data.			
Functional Requirements:			
- Show the banner only during the scheduled rollup window.			
- The dashboard should remain accessible.			
- Existing APIs should continue functioning normally.			
- Users should still be able to navigate the application.			
- The banner should disappear automatically after the rollup window.			
Acceptance Criteria:			
- Banner is visible only between 12:01 AM and 12:15 AM IST.			
- Banner is hidden outside the scheduled window.			
- Users are informed that analytics and reports may temporarily be incomplete.			
- There is no impact on existing dashboard functionality.			
- Banner styling follows the application's standard information/notification design.			
Expected Outcome:			
Users clearly understand that temporary discrepancies in dashboard metrics are due to the scheduled daily rollup process rather than a system issue.
