Target version:		Spent time:	0.00 hour
Description			
While posting a Work Completion Certificate (WCC), clicking the Confirm button in the confirmation dialog results in a 500 Internal Server Error, preventing the WCC from being posted successfully.			
Steps to Reproduce:			
Navigate to Works → Work Completions.			
Open a WCC in Draft status.			
Click the Post button.			
In the confirmation dialog, click Confirm.			
Observe the error.			
Actual Result:			
The API returns a 500 Internal Server Error when the Confirm button is clicked.			
An error message is displayed: "An error occurred while posting the work completion certificate."			
The WCC is not posted.			
Expected Result:			
The WCC should be posted successfully without any server error.			
The corresponding station service expense should be created (if applicable), and the WCC status should be updated to Posted.			
A success message should be displayed to the user.			
Environment:			
Module: Works → Work Completions			
Action: Post Work Completion Certificate (WCC)			
Issue Type: Backend/API (500 Internal Server Error)
